

Group 30

CS3307 - Stage 2

User Stories

User story 1: Create account

As a student, I should be able to create a local account (username and password), so that my study plan is stored separately from other users on the same platform.

Acceptance tests:

- Given a username that doesn't exist, when valid info is entered, then the account is created.
- Given a duplicate username, when a student tries to create, then a clear error message is shown and nothing is overwritten.
- After an account is created, the student should be able to login successfully.
- A per-user data file/location is created for the new account.

Story Points: 1

User story 2: Login

As a student, I want to be able to log in with my username and password, so that I can securely access my **personal** account and manage it.

Acceptance tests:

- Login succeeds with the correct username and password and loads that user's data.
- Login fails with incorrect credentials and does not load any data.
- The system validates credentials against the database.
- Displays appropriate error messages for incorrect credentials.

Story Points: 1

User story 3: Logout

As a student, I want to log out of my account, so that my personal information remains secure and is protected when I have finished using the application.

Acceptance tests:

- Terminates the user session.
- Redirects to the main page or login page and prevents access until login.
- The user is informed they have successfully logged out by displaying a message.

Story Points: 1

User story 4: Add study item (task/assignment/exam/reading)

As a student, I want to be able to add a study item with a title, type, due date, estimated hours, course name and priority.

Acceptance tests:

- The required fields must be validated such that no empty title, a valid date and positive number of hours are used.
- Item is added to the list after it is created.
- Students can create at least 50 items.

Story Points: 2

User story 5: View, Search, and Filter Study Items

As a student, I want to be able to search for specific tasks and filter my list so that I can quickly find items or group them by priority and course.

Acceptance tests:

- Items are displayed and sorted by default by the due date.
- Users can enter a text query to search for specific item titles or descriptions.
- Students can apply filters based on ItemType, priority, or due dates.
- The items that are overdue are visibly marked.

Story Points: 2

User story 6: Today and current week view

As a student, I want to be able to view a list of current week's task starting from today so that I know what to exactly work on now.

Acceptance tests:

- Returns a list of current week's sessions along with the ones for today.
- Sessions would be shown with item's title, duration, due date and priority.
- If there are no sessions today or for the current week, the student gets a message: "No tasks for today!"
- If tasks for the future or from the past appear, we should return failure

Story Points: 1

User story 7: Edit a study item

As a student, I want to be able to edit an existing study item (any of the fields) so that my plan stays accurate when things change.

Acceptance tests:

- Given an item that exists, when I edit its fields with valid values, then the item updates.

- Given an invalid edit, when I submit, then the system rejects it with an error message and keeps the old values.
- If the due date or estimated hours changes, then the system prompts to regenerate the plan.
- The system validates that dates follow the standard time format (YYYY-MM-DD or preferred) and rejects invalid dates like Feb 30th.

Story Points: 2

User story 8: Delete a study item

As a student, I want to be able to delete a study item so that I can remove tasks I no longer need.

Acceptance tests:

- Given an item that exists, when I delete it, then it is removed from the item list.
- Any sessions that were involved with the deleted item are also removed.

Story Points: 1

User story 9: Mark Session Complete

As a student, I can mark a study session as completed so that I can track my progress and update my remaining workload.

Acceptance tests:

- Users can select a session from today's view.
- Completing a session changes its status to "completed" and updates item progress (hours completed).
- Completed sessions no longer appear in the active tasks.
- Progress is saved to the user's data file.

Story Points: 2

User story 10: In-App Reminders

As a student, I can see reminders for overdue and upcoming tasks when I launch the app, so that I don't miss important deadlines

Acceptance tests:

- Reminders appear automatically on program startup.
- Shows items that are overdue (highlighted).
- Shows items due in specific days (1 day, 3 days, 7 days).
- Each reminder displays the course name, item title, and due date.
- If the

Story Points: 5

User story 11: Save Data

As a student, I can save my study plan data locally so that my work stays between sessions.

Acceptance tests:

- Data is automatically saved when changes are made.
- All study items, sessions and work progress are saved.
- Data is saved in JSON format.
- Each user's data is saved to a separate file.
- Corrupted saves don't overwrite good saves and data.

Story Points: 3

User story 12: Load Data

As a student, my study plan is automatically loaded when I log in, so that I can continue where I left off.

Acceptance tests:

- Data is automatically loaded after successful login.
- All previously saved items and work appear.
- Completed sessions status is preserved.
- Invalid or corrupted JSON files display error without crashing the app
- Empty and new accounts load with no items (clean new file)

Story Points: 2

User story 13: Generate a study plan (auto-schedule sessions)

As a student, I should be able to generate a study plan so that my tasks are broken into sessions across days before deadlines.

Acceptance tests:

- Plan only schedules sessions on or before due dates.
- Total schedule time per item equals estimated hours.
- If time is insufficient before the deadline, the system warns and still produces a best-effort plan. (When an item requires 5 hours but the session length is set to 2 hours, the system generates two 2-hour sessions and one 1-hour session)
- Regenerating plan updates sessions (no duplicate sessions left behind).

Story Points: 5

User story 14: Set Scheduling Constraints

As a student, I want to set my daily availability and weekend preferences so that the app generates

a realistic plan that respects my personal downtime.

Acceptance tests:

- Users can set a daily max hours value (0-24) and it is saved.
- Users can toggle "Include Weekends" to prevent sessions from being scheduled on Saturdays or Sundays.
- When generating a plan, total scheduled session time respects these constraints.
- If total required hours exceed available time, the system warns the user.

Story Points: 3

User story 15: **Customize session length**

As a student, I should be able to choose a preferred session length like 0.5h, 1h etc so that my plan matches my study style.

Acceptance tests:

- Users can set a session length and it persists when you restart the app.
- Generated sessions respect the chosen length (except possibly the last session for an item, which may be shorter to fit remaining hours)
- Changing session length triggers a regenerate prompt or auto-regeneration of the plan.

Story Points: 2

User story 16: **Progress Analytics and Streaks**

As a student, I want to see my study streaks and weekly summaries of completed work so that I can track my productivity over time.

Acceptance tests:

- The system calculates and displays "Streak Days" based on consecutive days with completed sessions.
- A "Weekly Summary" is available showing hours completed versus hours planned.
- The system provides a completion rate percentage for each course.

Story Points: 3

User story 17: **In-App Help and Instructions**

As a student, I want to access help and instructions within the app so that I can understand how the commands and scheduler work.

Acceptance tests:

- The user can trigger a "help" command or view an instructions screen.
- Instructions clearly explain how to add items and how the "Smarter Scheduling" logic

works.

Story Points: 1

User story 18: **Command Interface**

As a student, I want to interact with the app using text commands (e.g., add item, view today), so I can quickly manage my schedule without a complex mouse interface.

Acceptance tests:

- The CommandParser correctly identifies valid commands; the system provides an error message for unknown commands; commands accept arguments (like item titles or dates).

Story Points: 1

User story 19: **View tasks left**

As a student, I want to be able to view only tasks that I have left incomplete.

Acceptance tests:

- viewLeftTasks displays list of tasks that are not completed. If there are no tasks left to complete, then this method returns nothing.

Story Points: 1

User story 20: **Automatically view a list of tasks ordered by priority in descending order**

As a student, I want to be able to view tasks with the highest priority(high value) on the top and tasks with least priority(least value) on the bottom.

Acceptance tests:

- The app should be able to display tasks with the highest priority on the top and tasks with lowest priority in the bottom.

Story Points: 1
